BEEF 14

Pecus Beef 14 Pellet is a complete balanced diet formulated for beef cattle. Pecus Beef 14 Pellet is designed to be a versatile product. Pecus Beef 14 Pellet contains 14% protein enabling it to be used in a fattening program, bull diets as well as production and maintenance diets.

- Molasses based for increased intake and palatability.
- In pelleted form to reduce waste and selective eating.
- Balanced as such and can be fed as is.
- Versatile and can be used in a variety of production applications
- Can be fed as a supplement on natural pasture.

FEEDING RECOMMENDATIONS

All animals need to be adapted onto Pecus Beef 14 Pellet for 7 – 14 days when first introduced. The adaption period will depend on the required production system.

Creep Feed:

Pecus Beef 14 Pellets can be fed as a creep feed to calves to reduce condition loss of the cow and to be able to wean them earlier at a heavier weight.

Feedlot Fattening:

Feed Pecus Beef 14 Pellets as a starter and grower to weaner calves entering a feedlot program. Hominy Chop can be added in the finisher phase up to 35% of the diet to encourage fat deposition. Mix Pecus Beef 14 Pellets with equal amounts of Hominy Chop as a fattening diet for old cows.

Growing out on pastures:

Pecus Beef 14 Pellets can be fed to growing bulls and young animals as a production supplement on green pastures. Feed up to 3% of body weight depending on the pasture quality and quantity.

Production supplement:

Feed 1,5 kg of Pecus Beef 14 Pellets per day to beef cows as a supplement to maintain condition and increase milk production after calving. **Ensure that a Pecus Trace Mineral block is always available to animals receiving Pecus Beef 14 Pellets**
